CARTS

- Cut, score and fold the templates where noted
- There isn't a great deal I can tell you about this model other than this: If you have cut, scored and folded the model correctly you should see exactly how it fits together. Please note that at the octagon shape near the top, the center fold is a normal score (Not a reverse side score). The two arrows indicate that the tabs just below this point need reverse side scoring. Now, glue your model together.
- You may also want to glue the wheels together before doing anything else. Do this if you wish to remove the black area between them with your hobby knife but this is purely optional.

Cut Through Black Lines and Borders
Score and Fold Along Dotted Lines
Score and Fold on Reverse Side
