THE WELL

- Cut, score and fold where marked.
- Once the main well section has been folded begin to glue its tabs to the underside of the black center point (See bottom photo for reference). Glue the final connecting tab to the inside of the well wall.
- Fold the roof section in half and glue (NOT ALONG THE GREEN SPINE). Once dry, score along the green spine and bend.
- Fold and glue the two supports. Paste the legs of the supports on the inside of the well walls (See photos).
- Fold and glue the rope section. Glue the tabs to the top center point of the supports. This section acts as a brace between the two supports.
- Glue the roof tabs on the supports to the roof. If you have problems reaching these tabs use a pencil or other small implement to reach the tabs.

Cut Through Black Lines and Borders
Score and Fold Along Dotted Lines
Score and Fold on Reverse Side
