

## "MASTERBOARD"

Quickly becoming a WorldWorks trademark, Masterboard is the perfect way to define a playing area, without taking up the entire gaming table. Play tested numerous times; Masterboard is proving to be an ideal size for tabletop combat. It's also the best way to keep your ground tiles from warping. Once complete you will have a sturdy game board that will last you as long or longer than any game board in your closet ;)

Masterboard is completely compatible with other WorldWorks Masterboards included in the DungeonWorks, VillageWorks and CaveWorks model sets.

### Step 1

- There are five core ground tiles for use in this pack; three are standard 1-inch tile sets while the other two are 1.5-inch grids for click-based players. For the "Pubs & Inns" project you may choose to create smaller Masterboards depending on your needs. Typically twelve of the standard 1-inch tile sets fit on a 28 by 21 inch sheet of foamcore found at almost any drug or office supply store. First you must choose which tiles you are going to use for your board (1.5-inch, 1-inch or grid free).

### STEP 2

- Start by pasting the back of your selected tile with a thin but even coat of glue.

- Place your first tile at the top left corner of the foamcore making sure it is flush and even on all sides.
- Once the tile is in place, quickly smooth any air bubbles out of the tile with the palm of your hand. Work the air bubbles to the edge of the tile. Be careful not to move the tile during this process.
- Continue pasting tiles from the edge of the last tile and repeat the above steps. In no time you will have covered the entire board.
