

CASTLE TOWER

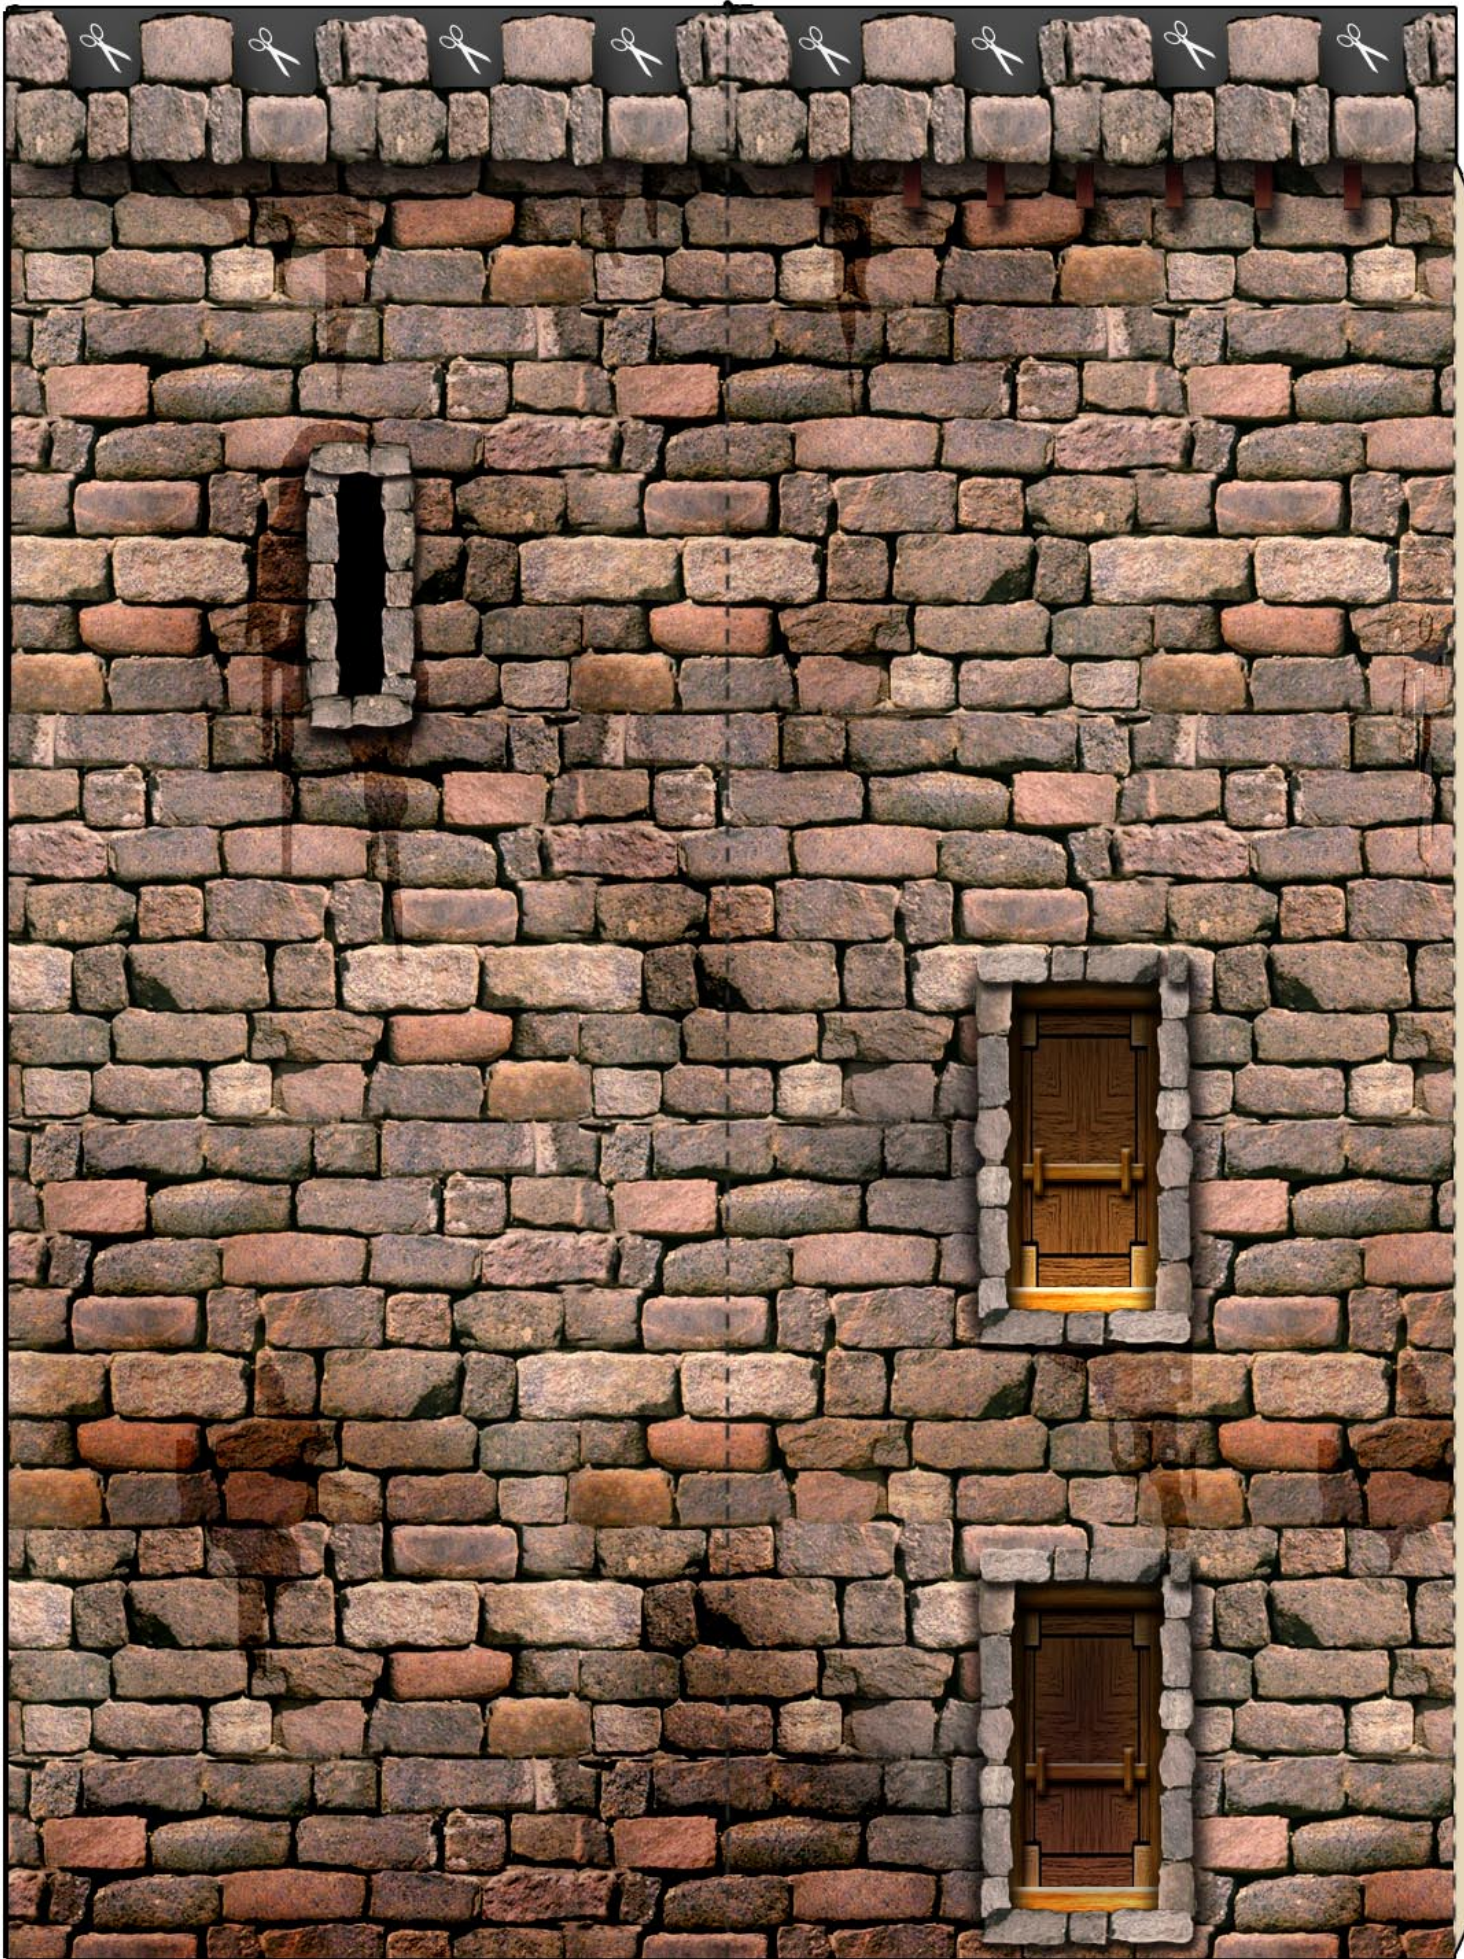

Difficulty Rating: 2

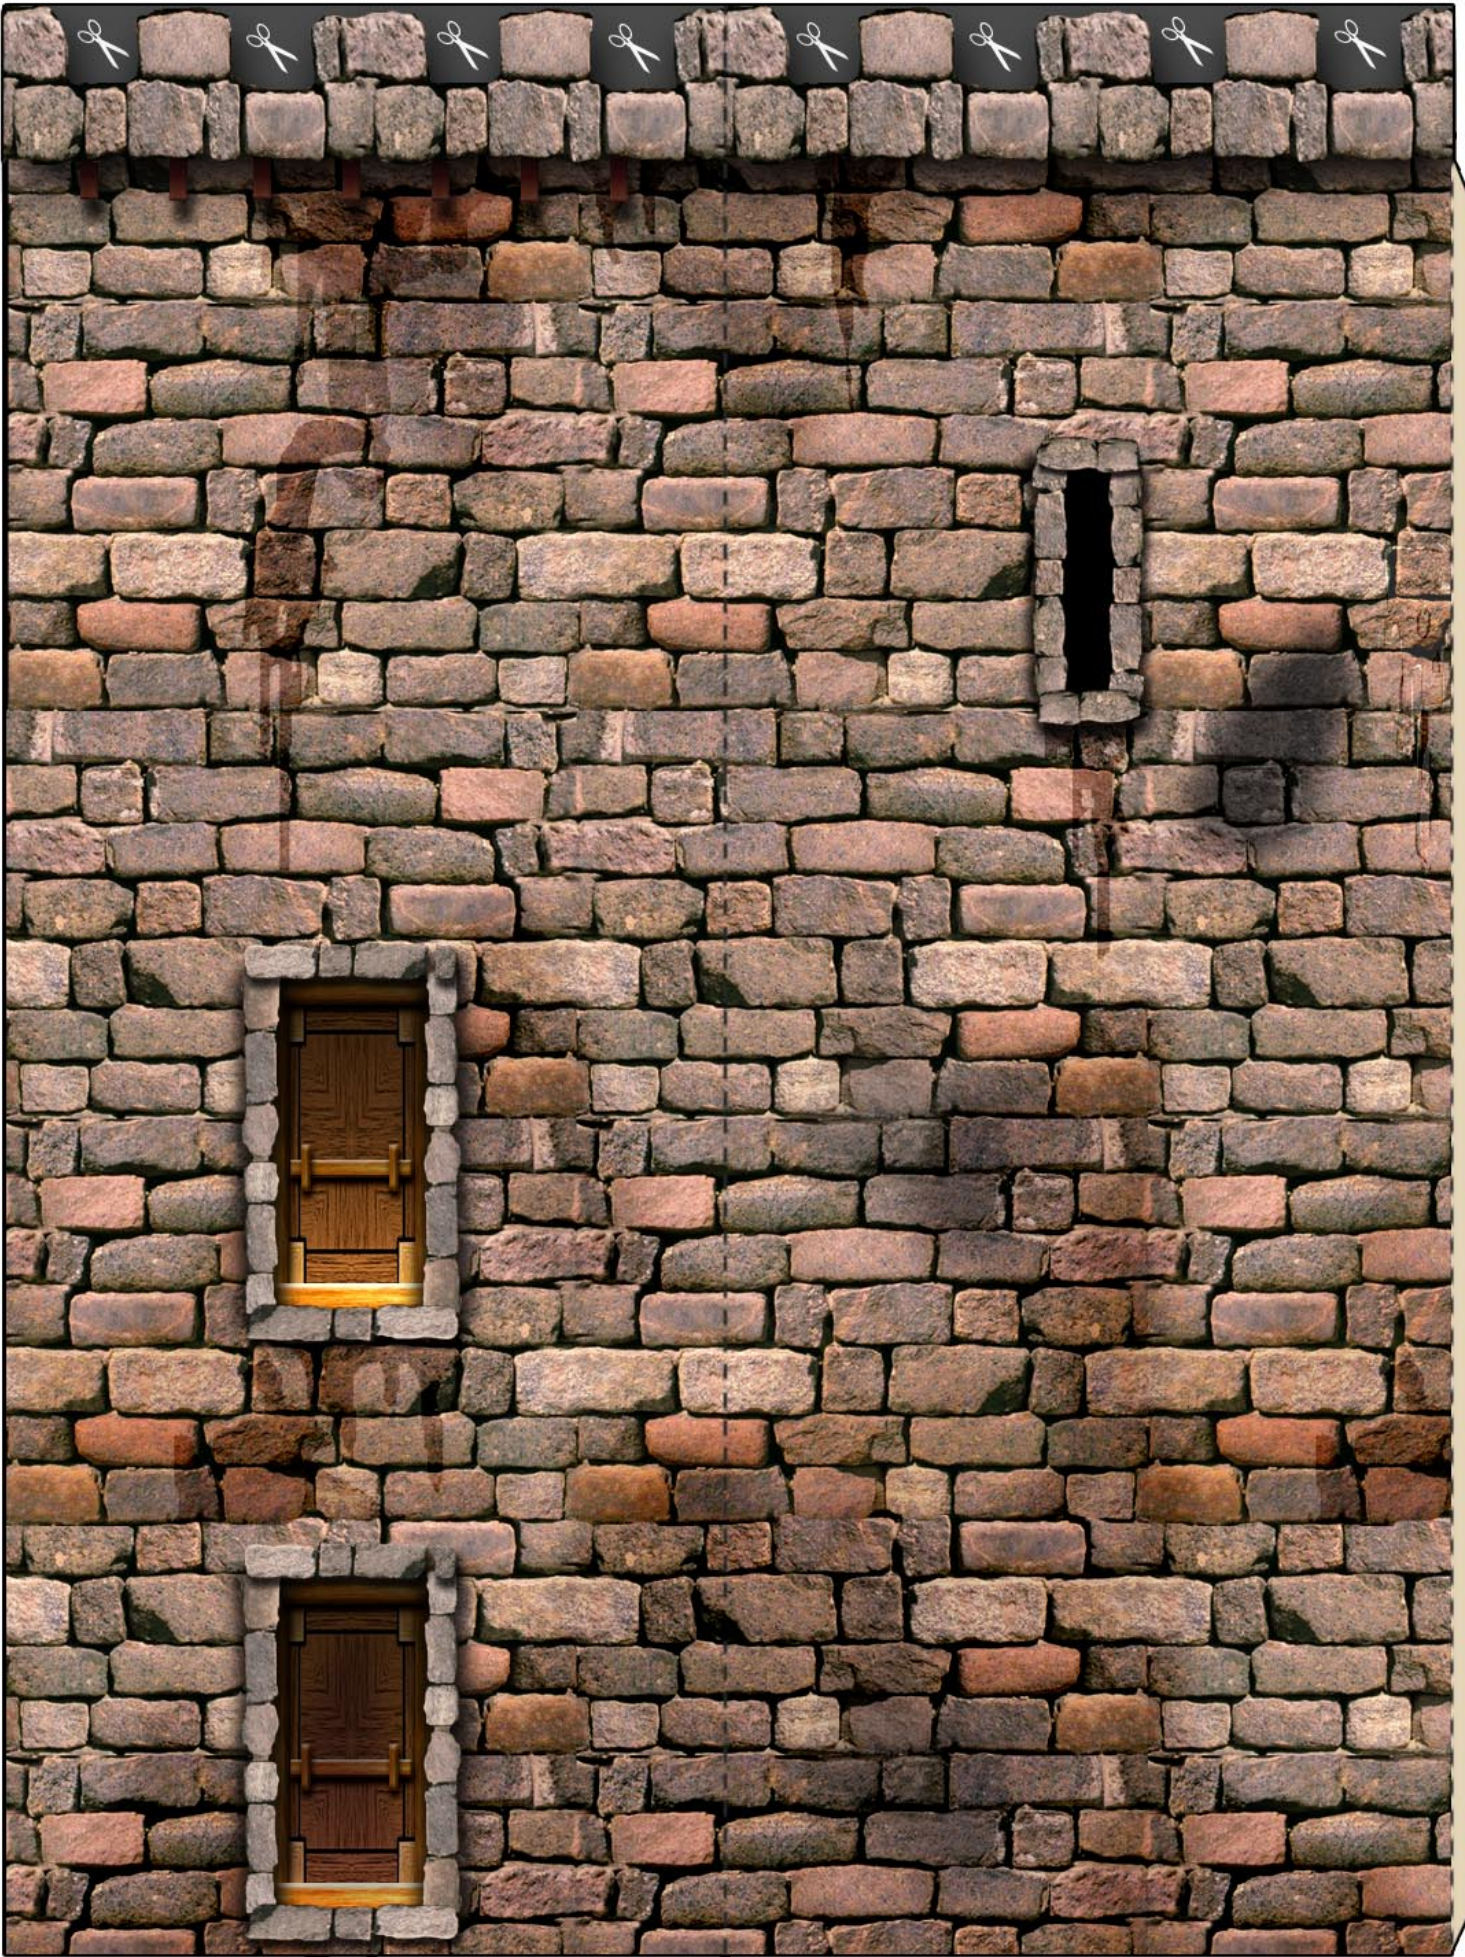

This model requires very few folds and shouldn't take you more than 10 minutes to complete.

Building Instructions

- Start by printing off all the templates for this model
(Tip: Give each page a couple of minutes to dry before cutting, See "Printing Tips")
- Cut out all of the various pieces for the model (See "Cutting Tips")
- Take the towers from pages 1 and 2. Fold them and lay them beside each other for gluing.
- Glue the tab on tower page 1 and attach to tower page 2. Make sure to glue these pieces together on a solid surface while applying even pressure to the length of the tab.
- Glue tower page 2 tab to page 1. It is important to use the "wooden ruler technique" (See "Gluing Tips" in the Beginners Guide) during this phase, as it will provide the length of the tab equal pressure for a secure bond.
- Fold one of the tower tops from page 3 making sure to score the reverse side and fold the flaps upward. Save the other tower topper for your next tower.
- Position the tower top into the tower for fit. Make sure that the tower topper's gluing tabs are just below the top stones of the tower. Depending on how precise you have cut this piece you may have to try a few different positions for a proper fit.
- Once you are sure of position pull back one tower tab and glue into place. Continue gluing the remaining 3 tabs.

You can touch up any white areas on the model by using a grey felt marker.
