# Castle Walls

Difficulty Rating: 4

The Castle Walls are relatively simple to put together but the order in which you put them together is essential...

Building Instructions

· Start by printing off all the templates for this model
 (Tip: Give each page a couple of minutes to dry before cutting, See "Printing Tips")

· Cut out all of the various pieces for the model (See "Cutting Tips").
 Score and fold where marked

· Take the catwalk from page one and fold as noted. Glue the long tab against the wall (page 1) where marked
 (just below the long wooden beam).

· Bend the 3 supports of the catwalk down and glue into place so that the catwalk is level.

· Take the wall section from page 2 and place face down (print side down, white side up) on your work surface.
 Apply one dot of glue to each of the top stones.

· Take the page 1 wall section (with the catwalk attached) and line up the top stones with the glued stones on page 2
 and apply pressure. Allow a couple of minutes to dry.

· Glue the tabs from wall 1 and wall 2 to each other. Use the "Wooden Ruler Technique" (See "Gluing Tips") to secure
 the tabs in hard to reach areas.

· Fold the bottom base tabs outward and you're all done!
