"Tables and Chairs"

Hopefully these multipurpose tables and chairs will satisfy your many in-game needs. Cut, score and fold your models where noted.

CHAIRS

- As with many models in this set the chairs are more difficult to explain then they are to build. They have been designed with speed and ease of construction in mind. Once folded as noted their construction becomes obvious. Cut and score where noted. Pay careful attention to the chair section when scoring as there is one fold that requires reverse side scoring. After folding the chairs fold and glue the chair-back sections together. Glue and fold over the leg sections and you're done!

Tables

- The long and short tables are extremely easy to build. Simply fold as noted and glue over the leg sections (so that the image appears on both sides). If you're a detail hound like me you may want to remove the black areas between the table legs for an added degree of realism.

"RoundTable"

- Glue the eight-sided table trims glue tabs to the underside of the main table. Glue the four sided table base into a square and glue the top tabs to the underside of the table.
