THE HOARDING

completion time

These wooden sheds sit atop the main castle wall sections and are used to fire down on opponents while under complete cover. They're easy to build and add a great visual diversity to your castle.

Cut, score and fold your model as shown. Apply a thin but even bead of glue to the inside of the wall.

Burnish (rub) the model squeezing out any air bubbles and distributing the glue evenly to all edges.

Allow for a short drying period and cut away the remaining white space.

Apply glue to the remaining end wall tabs.

Hold the tabs in place where marked on the reverse side of the roof until dry.

“Edge” with a dark felt.
