This is one heck of a fun model and one of my favourites. Use it to bridge any handy four-inch gap, it will also hold an astounding amount of weight. You can cut out the trapezoidal areas between the beams and get a nice effect as shown below on the right.

STEP 1:

Cut and score as shown above. Apply a coating of glue to the underside of the railings and fold over. Now is the time to cut the trapezoidal areas out if you are going to. Whichever you decide, fold the glued sides upright and align. Glue the end flaps and fold them in, press hard again.
