

MODEL TYPE:	RAMP TRAP (It actually roles!)
DIFFICULTY:	2 out of 5
APPROX BUILD TIME:	Quick – 5 to 10 minutes (Time may vary depending on skill level)
DUPLICATIONS (Suggested):	1 to 2 (optimal)
EDGING COLOR:	Brown and or Black (What is “Edging”? Please refer to the included “ Beginners Guide ”).

STEP 1:

Cut, score and fold your model as noted. On the main ramp section glue the two longest flaps to the underside of the ramp. Glue the remaining two flaps in place on the reverse side of the ramp wall (see above photo).

STEP 2:

On the tumbler model start by gluing the longest flap to the inside of the opposing interior face. Apply a thin coat of glue on the end flap and glue in place. Once dry work your way around the edges of the end cap pushing the cardstock inside to stabilize the circular shape of the model. To affix the opposite glue flap in place apply a liberal dot of glue to the flap, insert the tab and hold in position for 30 seconds. Repeat the stabilizing step on this side as mentioned above.
