MINE CARTS & RAILS

Difficulty Rating: (Medium) The pictures don't do it justice. This model looks really cool once set on its rails in the mines. Many playing possibilities with this little puppy ;)

Recommended Duplications: One sheet of each is enough to get you going but I could think of a few scenarios where you might want more.

Steps

- This is actually a very difficult model to explain but an easy model to build. The whole model is much like an accordion in the way it is folded together. If you have followed the basic scoring and folding guides on the model sheet properly then the model essentially builds itself. *(Please read the "Beginners Guide" for proper cutting and scoring methods)*
- Once you have glued the cart together you may opt to cut around the wheels for added realism. You may also want to color the underside of the cart black with a felt although the bottom is rarely seen.
- The gold, silver and copper load beds are designed so that you can simply drop them in without gluing. This is a nice option if you want the cart empty at some point.
- **RAIL SECTIONS:** Um, not much to tell...Cut them out....place where needed ;)

Edging Color: Black felt *(What is "Edging"? Refer to the "Beginners Guide" included with this model set)*
