

"Tables and Chairs"

Hopefully these multipurpose tables and chairs will satisfy your many in-game needs.

Instructions

- Cut and score where noted. Pay careful attention to the chair section when scoring as there is one fold that requires reverse side scoring. The base of the round table requires that you first sandwich glue the mirrored sections together. Once they have dried you can then cut out the white areas and connecting slits. You can then slide the two halves together to form the base of the table (see photo). Apply a small portion of glue to the remaining tabs and affix your circular table to them as close to center as possible. Once you have folded the remaining models it will be very obvious how you must glue them. If you're a detail freak like me you may wish to remove the black areas from the tables for a greater degree of realism (please note: If you do this your tables won't be as strong.). This should be done after the models have had a chance to dry (at least 5 minutes).
