

North America is a large continent. It ranges from the temperate regions to the Arctic, and is home to a wide variety of animals.

The bald eagle, the United States' national bird, flies from the southern part of the continent to the Arctic. The bald eagle has excellent eyesight. It is said to be able to spot prey from a distance of about five kilometers (three miles).

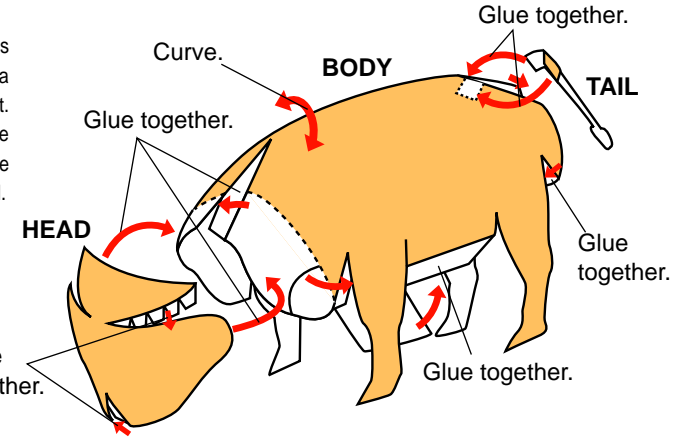

Print out this pattern, cut out the pieces, and assemble as shown in the diagram. It may be easier to cut widely around each part first, then trim the parts carefully. Don't worry if you can't cut too closely around some of the fine details.

How to crease the legs  
Crease the animals' legs to give them a bit of a curve, as shown at left. This will strengthen the legs and allow the animals to stand up well.

Fold forward to stand up.

American bison

Canadian porcupine and bald eagle

BALD EAGLE

Fold forward to stand up.
